

Assignment 5

Part A

- Create a bullet list containing links to four web sites of your choice.
- When the user clicks each link, a pop-up window with a size of 200 by 200 containing a friendly message should open up.
- Name the Web page **assign5a.htm**.

Part B

- Write a program that displays the system's date and time on the title of the browser with the format shown in the following picture. The time should be updated every second.

- **Hint: Add the setInterval() method to the body tag which calls a function every second (1000 millisecond.)**
- Name the Web page **assign5b.htm**.

Part C

Create a Web page containing JavaScript statements and functions that perform the following:

- Today's date should be displayed in the following format:

Today is: mm/dd/yyyy

- If the day is Monday, Tuesday, or Wednesday, display a message that says "Have a nice week!"
- If the day is Thursday or Friday, display a message that says "The weekend is almost here!"
- If the day is Saturday or Sunday, display a message that says "Enjoy the weekend!"
- If the date is after the 25th of a month, display a message that says "Next month is just around the corner!"

Example:

Today is 11/25/11
The weekend is almost here!
Next month is just around the corner!

- Name the Web page **assign5c.htm**.

Zip your files and attach a zip file to the assignment.
